October 30, 1962

Dr. Joshua Lederberg
Professor of Genetics
Stanford University Medical Center
Palo Alto, California

Dear Dr. Lederberg:

PS
Thank you for your letter of October 24th. I found your reprint most interesting and knowing you and your work did not find it unexpected though I had not been aware of it. Dr. Beadle at almost the same time had **suggested** the possibility in neoplasia of enzyme deletion playing a not unlike role in the genesis of tumors.

Your having made the suggestion in your nutritional concept which our work seems to fit, I thought you might be interested in the enclosed reprints. Most of our work relating to the papilloma virus is currently in press in The Journal of Experimental Medicine.

With best regards.

Sincerely yours,

Stanfield Rogers
